

RAPIDPRESS

COMPLIANCE WITH ASME B31.3

The Rapidpress piping system has been rigorously tested and verified to meet the standards for unlisted joints in accordance with ASME B31.3-2016.

Built for demanding environments, Rapidpress fittings have demonstrated exceptional durability—maintaining full functionality at 1.5 times their rated pressure, and withstanding proof testing at 4x the rated pressure without failure.

This performance goes well beyond the minimum requirement of not failing below 3 times the rated pressure, to comply with B31.3. When operated within the specified pressure limits shown below, Rapidpress is the smart, reliable choice for high-performance industrial piping.

The below table demonstrates the bursting pressure provided by the manufacturer in compliance with paragraph 304.7.2 of the B31.3 Standard.

Bursting Pressure - Safety Factor
